REFLECTIVE MICRODISPLAY FOR PORTABLE COMMUNICATION SYSTEM

ABSTRACT

5 The invention relates to a microdisplay system that
utilizes a small high resolution active matrix liquid
crystal display with an illumination system and a
magnifying optical system to provide a display for a
portable communication device. A handset for the
communication system incorporates the display for use as,
for example, a wireless telephone or paging device. The
10 small display can provide a high resolution color image at
low power thus providing for portable battery powered
operation.
